

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph beginning on page 7, line 3, as follows:

The frame unit 20 includes a first frame 21 mounted at front sides of the reciprocating motor 30 and the cylinder 41; a second frame 22 connected with the first frame 21 for supporting the outer stator 31 of the reciprocating motor 30 with the first frame 21; and a third frame 23 connected with the second frame 22 for receiving and supporting the resonant spring unit 50 of the piston 22-42 with the second frame 22.

Please amend the paragraph beginning on page 8, line 3, as follows:

The second cylindrical portion 23b of the third frame 23 is fixed at the first cylindrical portion 22b of the second frame 22, so that an inner circumferential surface of the first cylindrical portion 22b and an outer circumferential surface of the second cylindrical portion 23b of the third frame 23 are contacted to each other. An end of the first cylindrical portion 22b and the outer circumferential surface of the second cylindrical portion 23b are engaged to each other by welding (W) so that the second frame 22 and the third frame 23 can be coupled with each other. Herein, the second frame 22 and the third frame 23 may be coupled with each other not by welding but by using a coupling means such as a ~~welt~~ bolt or the like.
